## **TLM 1000** **TLM 2000**

Flexible and economical industrial system adapted to conveying workpiece carriers on assembly lines with automatic or manually operated work stations.

# General principle

Workpiece carriers are conveyed on two parallel belts which leave necessary room for stoppers, positioning units...  
Retractable pins, located under the workpiece carrier, allow :

> guiding the workpiece carrier with four pins on straight sections,

> guiding the workpiece carrier round bends with two pins (the other being retracted).

The modular design of TLM 1000 and TLM 2000 transfer system as well as the use of standard elements allow a great flexibility in the conception of assembly lines and reduce the time necessary for survey and implementation.

Further extensions and modifications can be easily made.

## Data

	TLM 1000	TLM 2000		
Workpiece carriers (mm)	100x100 100x150	200x200 200x250 200x300 300x300 300x400 400x400		
Load/workpiece carrier (daN)	2	10		
Speed (m /m n)	10 -15 -20	9 -15 -19		
Length of conveying unit Mini Maxi	500 3 160	500 6 250		
Maxiaccumulation load per motor (daN)	25	100		
Motorpower (380 V three-phases) (different powers on request)	0,09 KW - 0,4 A	V 9 15 19	KW 0,25 0,37 0,55	A 0,68 1,24 1,60

The maximum length of the conveying units are respectively :  
 > 3160 mm for TLM 1000  
 > 6250 mm for TLM 2000

For long spans, several elements can be joined end to end.

For important accumulations, the length of the conveying units is adapted to the load.

It is recommended to place sensors in order to control accumulation of the load.

Pneumatic cylinders must be equipped with flow rate controllers.

It is possible for long spans to be cut in order to facilitate the dismantling of the machines.

## Workpiece carriers

### Use :

Workpiece carriers are used to support and position the components during the process.

The upper plate (made of aluminium) is used to fix the components and perform an accurate positioning of the workpiece carrier.

The PA base (which has a very low friction coefficient) is used to shelter the pins and to stop the workpiece carrier on the stopper.

Steel bushes assure perfect accuracy and resistance against deterioration.

Small metallic bars allow detection at stoppers and at positioning units.

### Unidirectional workpiece carriers :

They are used in applications which don't require any swivelling.

They allow operating with only one sensor in «stopper up mode».

### Multidirectional workpiece carriers :

They can be used in case of swivelling of the workpiece carrier on the line, (90° and 180° for the square workpiece carriers, only 180° for the rectangular workpiece carriers).

Workpiece carrier 100x150

Workpiece carrier 300x300

Details of workpiece carrier

### 90° kit :

Necessary for a 90° swivelling of the workpiece carrier on the line.

Including 2 bushes and 2 detection bars.

## Conveying units

### Use

Moving and accumulating workpiece carriers.

The motor can be fitted either vertically or horizontally.

According to the load, longer spans can be joined end to end by a straight joining.

The cutting of the conveyors allow division of the length, making transport and installation of the lines easier.

They also allow to make important lengths for reduced loads.

Spacers have to be fitted between the profiles every 1 m or 1,5 m to ensure a perfect parallelism of the profiles.

## Cams

### Use

#### Cams ED, EG, SD, SG

Allow a perpendicular transfer of workpiece carriers from one conveying unit to the other.

The workpiece carrier is guided by the two inside pins, the outside pins are retracted.

They are also used for derivations.

Cam EG 300

#### Short cams

##### SD-EG SG-ED

#### Double cams

Short cams and double cams allow deviation of workpiece carriers from a main line to a parallel secondary line without additional motorization.

Economical, compact and very easily managed, they are ideal to set up work stations in derivations.

Cam EG 100

Short cams 200

 Do not accumulate the workpiece carriers in the cams.

Double cam 400	1 set	140.21.000

## Derivations

### Use

Derivations have to be used with a cam. They allow diversion or not of the workpiece carrier by retraction of the pins on one side or the other of the conveyor.

The two cylinders are controlled by only one solenoid valve.

Derivation 200

## Returns 180°

### Use

Allow the return of the workpiece carrier on a parallel conveyor with a reduced space between the two conveyors.

The workpiece carrier is conveyed always keeping the same side towards the outside of the line.

TLM 1000

Width 100

### Technical data

Housing aluminium  
2 parallel belts driven by a bevel gear pair on a conveyor unit.  
(No additional motor)

 Minimum load on the workpiece carrier : 0,3 daN

Do not accumulate the workpiece carriers in the returns.

Weight : 8 kg

Designation/Dimensions

Return 180° 100

# Stoppers

## Use

Stopping workpiece carriers during processing requiring no accuracy.

Stopping the workpiece carriers in order to respect conveying priorities at the end of the derivation.

### Stoppers 100

Stopper with simple or double effect, supplied with lateral guides and sensor bracket for detection of workpiece carriers.

### Stoppers 200 - 300 - 400

Can be supplied with a spring to make the stopper rod pop out in case of an emergency stop.

Supplied with sensor bracket for detection of workpiece carriers.

### Short stoppers 200 - 300 - 400

Thanks to the combination of small size and reduced height, the short stopper allows construction of ergonomic work stations along the line.

Reduced accumulated load.

Stopper 200

# Positioning units

## Use

Stopping and positioning workpiece carriers for operations requiring accuracy. The workpiece carrier is stopped, then lifted off the belts and positioned by two centering pieces.

### Positioning units :

The positioning unit is directly fitted on the conveying units.

### Positioning units for station:

They are fixed to a table or a frame in order to assure accuracy with the other surrounding elements.

### Heavy positioning units :

For operations requiring accuracy, and involving important strain (up to 1500 daN) at the center of the workpiece carrier.

The positioning unit must be fixed on a frame capable of supporting the strain applied.

### Lift positioning units :

Stop and positioning of workpiece carriers at an important height above the conveyor. The workpiece carrier is stopped, then elevated to a specific height, while being held by two centering pieces.

### Press positioning units :

Support important strain (5000 daN) on the surface between the 2 belts.

The positioning unit must be fixed on a frame capable of supporting the strain applied.

### Multi-positioning units :

Allow two accurate positionings of the workpiece carrier at the same station.

## Anti bouncing back

TLM 1000

TLM 2000

### Use

Avoids workpiece carrier bouncing back on stoppers or positioning units in case of high speed.

Allows to reduce the changing time of workpiece carriers in the positioning unit.

### Technical data

Parts, PA black  
Fastening parts

**Weight** : 0,1 kg

Designation/Dimensions	Order unit	Reference
Anti bouncing back 100	1 set	110.30.000
Anti bouncing back 200	1 set	120.30.000

## Logic block

TLM 1000

TLM 2000

### Use

Allows simple identification of workpiece carriers and memorising information at different stages of the line. The coder consists in a plastic body in which steel ball can only have two stable positions. Coding is done by changing the position of the ball with a micro cylinder. Reading is done by magnetic detection. Resetting can be done simply by running the coder under a fixed cam. One coder is equivalent to 1 byte of memory. Several coders can be placed side by side on the same workpiece carrier .

R.A.Z. 300 - 400	1 pce	100.02.000

## Inductive sensor M12x100

### Use

Detection for the workpiece carrier

### Technical data

Shielded mounting sensor  
M12x100 detection range :  
4 mm  
LED control display  
PNP- 10 - 30 VDC  
Screwed connection, cable 5 m

Designation/Dimensions	Order unit	Reference
Sensor M12x100	1 set	200.10.200

## Cylinder sensor

### Use

Detecting the position of cylinders, stoppers or positioning units.

### Technical data

12-27 V  
LED control display  
Cable 5 m

Designation/Dimensions	Order unit	Reference
Sensor for cylinder, Stopper, Positioning unit	1 set	200.10.201
Sensor for cylinder, Lift Positioning unit	1 set	200.10.202

## Positioning kit

### Use

Allows accurate positioning unit on station.

### Technical data

2 axis screws M8  
2 hexagon socket head cap screws M8

Weight : 0,08 kg

Designation/Dimensions	Order unit	Reference
Positioning kit	1 set	120.62.000

## Belt welding kit

### Use

Welding bevelled conveyor belts.

Each kit includes :

- 1 belt tension system
- 1 thermic press
- 1 jar of glue

Designation/Dimensions	Order unit	Reference
Belt welding kit	1 set	900.00.002

## Bevelling device

### Use

Bevelling belts before welding.

Designation/Dimensions	Order unit	Reference
Bevelling device	1 set	800.00.001

## Belt

### Use

Belt for the moving of pallets on conveying units

Antistatic.

**TLM 1000** : 12,5 x 1 mm

**TLM 2000** : 25 x 1,6 mm

Designation/Dimensions	Order unit	Reference
Belt 12,5 x 1 mm	m	110.01.201
Belt 25 x 1,6 mm	m	120.00.201
Glue (40 g)	1 jar	800.00.004

## CAD files

### Use

CAD-data as .DWG and .DXF files.

Designation/Dimensions	Order unit	Reference
.DWG files		on request
.DXF files		on request

## Layout example

## Elcomodularity

According to the requirements of the manufacturing process, different kinds of modular designs are possible.

The design of the line can evolve in several stages.

### 1. Interchangeability of a module

- 4 fixing screws only
- No machining
- No adjusting

### 2. Adding a derivation

- 6 fixing screws
- No machining
- No adjusting
